

Overview of Combination Probes:-

In Steel making process saving time is of paramount importance. We at AIT have over the years based on customer requirements have developed combination probes precisely to meet this requirement of the customer.

Following are the advantages of Combination Probes:

- User has to maintain stock of only 1 material (i.e. Combination Probes).
- Safety of user is increased as he is exposed to the molten metal only once.
- Most importantly the plant is able to save time as temperature and sampling activities are completed in one go.
